

NDHP PERMITTING UPDATE

November 2011

NORTH DAKOTA HIGHWAY PATROL

Online Permit Additions

The online E-permits application is currently undergoing a remodel. During this project, the NDHP will be adding all permits types to the online application. This enhancement will happen over the next several months.

When will I see changes?

Our rollout schedule begins in mid-January 2012 with the following items:

- Work Over-rigs*
- Mobile Home 3507*
- ID Supplements
- User Defined fields for tracking user specific data

- More search criteria to find purchased permits
- Extension Requests
- New look and feel.

In late March 2012:

- All remaining permit types will be available online.
- Axle configurations can be stored with power unit info.

In January 2013 our in house permit application revision will be complete.

*Please note these permits may need to be approved prior to checkout until our routing project is complete.

Currently available on E-Permits:

Oversize 3507	10% Weight Exemption
Trip Permit	Fuel Permit
Interstate Permit	Combine Permit
LCV	Seasonal

Automated Routing

The Highway Patrol and the Department of Transportation are working on a Request of Proposal to procure an off the shelf routing application. This application will allow most over-dimensional loads the ability to

be routed without an approval process allowing permits to be purchased 24X7.

The RFP is expected to be released in December, with the procurement process taking ap-

proximately 5 months to complete. Our target implementation date in June 30, 2013.

We appreciate your patience while we enhance our system to provide better service to our customers.
